

which will increase the production of gasoline and hydrogen used in the production of clean fuels, is scheduled for completion by fourth quarter of 2007.

Fertilizer facility upgrades include:

- Expansion of the secondary gasifier to increase hydrogen production, with the additional hydrogen being converted to ammonia. This project is scheduled for completion in July 2006.
- Addition of ammonium nitrate capacity by the end of 2006.
- Additional urea capacity by fall 2007.

In addition, the nitrogen fertilizer plant, which uses petroleum coke as the feedstock for its gasification process, will benefit from the delayed coker improvements at the refinery. Coffeyville Resources Nitrogen Fertilizers is the only nitrogen fertilizer facility in North America that uses petroleum coke as a feedstock.

“We will have several hundred contractors on site for the next few years.” said Stan Riemann, Chief Operating Officer. “This will be a significant boost for the local economy.”

First built in 1906, various owners have expanded the refinery, both in capacity and complexity, throughout its 100 year history. In 1998, the nitrogen fertilizer plant was built adjacent to the refinery complex.

Coffeyville Acquisitions, LLC, a partnership of GS Capital Partners—the private equity arm of Goldman Sachs Group—and private equity investment firm Kelso & Company acquired Coffeyville Resources, LLC and its subsidiaries in June 2005.
